Scale and Succeed with Isovalent: Top 3 Use Cases for Your Kubernetes Journey

The choice of networking solution is paramount to the long term success and efficiency of any Kubernetes setup. Isovalent, the creators of eBPF, Cilium, and Tetragon, offer a robust suite of capabilities aimed at addressing the core challenges of modern enterprises. See the key use cases driving adoption of Isovalent's technical solutions and Isovalent's role in future-proofing infrastructure, reducing tool sprawl, and accelerating teams on the path to platform and compliance.

"Isovalent partnered with us, and we were able to deploy a frictionless network experience and provide consistent ability for our developers to deploy applications anywhere in any cloud ecosystem."
Guruprasad Ramamoorthy, Global Head of Cloud & Infrastructure at S&P Global

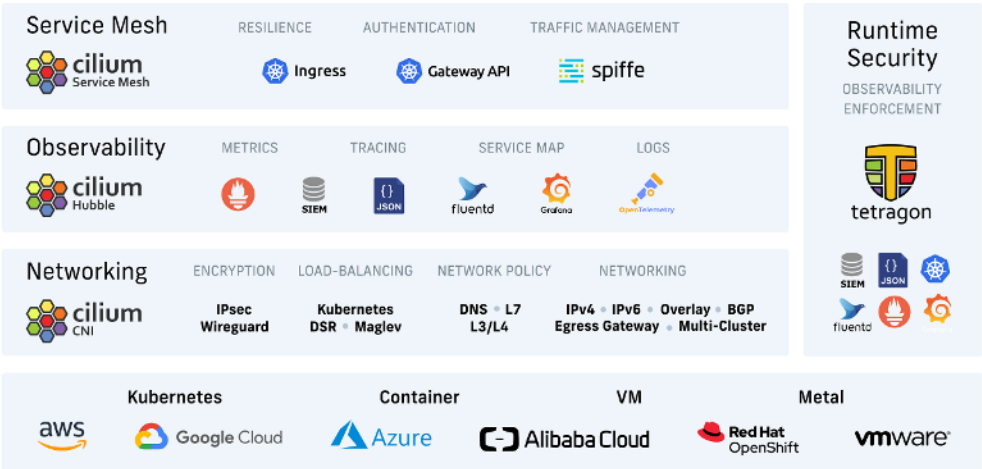
Future-proof your Infrastructure

Modernize now, or struggle later.

Challenge: As organizations strive to stay ahead in the dynamic cycles of platform engineering, the need to future-proof infrastructure is critical. Traditional networking and security solutions often lack the agility and scalability required to meet evolving demands.

Solution: Isovalent Enterprise, powered by innovative eBPF technology offers unparalleled scalability and high-performance, with efficient resource utilization and cost savings. As the cloud native standard for Kubernetes networking, it not only meets current requirements but also anticipates future needs, adapting seamlessly to evolving infrastructure best practices.

Benefit: Isovalent is the company behind eBPF, Cilium, and Tetragon, preparing enterprise infrastructures for the next stage in modern abstracted computing and leveraging future-aligned architecture to stay ahead in platform engineering.



Reduce Tool Sprawl

Save your team from the sprawl.

Challenge: The complexity of managing multiple tools and vendors within the K8s ecosystem leads to increased operational workflows, resource fragmentation, and higher costs.

Solution: Isovalent's platform, consisting of Cilium, Tetragon, and Hubble, consolidates essential functionalities ranging from networking to observability, to runtime security. By providing a unified tooling platform, Isovalent reduces the dependency on disparate tools or vendors, streamlining operations and overall team productivity.

Benefit: Through the adoption of Isovalent's integrated solutions, enterprises significantly reduce tool sprawl, leading to cost savings, simplified operations, and improved resource utilization for cloud native workloads.

Accelerated Path to Platform and Compliance

In production, not just the roadmap.

Challenge: Deploying and configuring cloud-native or open-source technologies can be time consuming and resource-intensive, delaying time to value and increasing operational complexity bringing projects together.

Solution: Isovalent Enterprise offers out of the box configurations and default rulesets, dashboards, and best practices, significantly reducing time and effort required to to establish a robust Kubernetes platform. By leveraging Isovlaent's expertise in eBPF, enterprises accelerate their journey to platform maturity and ensure compliance with industry standards.

Benefit: With Isovalent, enterprises expedite their cloud native compliance journey, minimize operational overhead, and achieve faster time-to-value, enabling teams to focus on driving innovation and delivering value to their customers.

cilium eBPF tetragon

A Rising Tide for All Platform Teams

As organizations navigate the complexities of modern platform engineering, the choice of networking solutions is pivotal - with technical considerations often reigning supreme. Isovalent's modernized, forward-thinking approach to cloud-native networking, security, and observability has led Cilium to become the standard in Kubernetes networking, with benefits that stretch beyond being the leading container networking technology and into the realm of operations. Cilium and Tetragon address the core challenges faced by enterprises, empowering them to future-proof infrastructure, streamline operations, and accelerate their journey to platform maturity and compliance. By partnering with Isovalent, decision makers position their organizations for sustained success over the short and long term.

Learn more and get started with Isovalent Enterprise for Cilium today!

isovalent.com/request-demo: Experience our platform's intricacies firsthand with an expert tailoring capabilities to your needs. Book your personalized session today and delve into the full potential of Isovalent Cilium Enterprise.

isovalent.com/labs: Explore Cilium, Hubble and Tetragon on Isovalent's learning platform with hands-on technical labs covering both OSS and Enterprise features from beginner, intermediate and expert level deep dive walkthroughs.

Isovalent

Isovalent is the company founded by the creators of Cilium and eBPF. We build open source software and enterprise solutions solving networking, security, and observability needs for modern cloud native infrastructure. Google (GKE, Anthos), Amazon (EKS-A), and Microsoft (AKS) have all adopted Cilium to provide networking and security for Kubernetes. Cilium is used by platform engineering teams such as Adobe, Bell Canada, ByteDance, Capital One, Datadog, IKEA, Schuberg Philis, and Sky.
